

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name freaky-coders

Your Name Jack McMillan

Your Team Member's Name Euan Bohm

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.
 - Developed Iteration 3 Feature 1
 - Developed Iteration 3 Feature 2
 - Developed Iteration 3 Feature 3
 - Developed Supporting Constructors

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
 - Developed Iteration 0
 - Developed Iteration 1
 - Developed Iteration 2
 - Developed Bonus Functions

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.
 - I understand that its unrealistic to think that one person would be developing an entire program in a work environment themselves and it's good to practice working with others. But I still believe that working with a team still has its own complications, especially when trying to implement someone else's foundational code to create supporting functions as you aren't sure about the exact implementation, parameters, etc. I do think that the use of classes and objects does make it significantly easier to work with a team.
